DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 18 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claim 18, lines 5-6, does applicant intend the "a magnetic core" to be the same as the "a magnetic core" of line 4? Applicant should clarify.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2, 5-10, 14 and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by Yoshizawa et al. [EPO 0 637 038 A2].

Yoshizawa et al. discloses a pulse transformer in an interface module for local data network with including magnetic core made of an amorphous or nanocrystalline alloy with a permeability greater than 15000 and a winding of a number of turns between 5 and 25 [see examples 1-2 and Tables 1-2].

Art Unit: 2832

Claims 1-4 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by EPO 0 378 823.

EPO 0 378 823 discloses a pulse transformer in an interface module for local data network with including magnetic core made of an amorphous or nanocrystalline alloy with a permeability greater than 15000 and a winding of a number of turns between 5 and 25 [see examples 3-6].

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 11-12, 15 and 17are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshizawa et al. in view of Suzuki et al. [US 5,741,373].

Yoshizawa et al. discloses the instant claimed invenion except for the specific composition of the magnetic alloy.

Suzuki et al. discloses the composition of the magnetic alloy [Tables 1-3] for a core structure in a transformer.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the magnetic composition of Suzuki et al. in the core structure of Yoshizawa et al. for the purpose of providing high saturated magnetic flux density.

Art Unit: 2832

Claim 18, as best understood in view of the rejection under 35 U.S.C. 112 second paragraph, is rejected under 35 U.S.C. 103(a) as being unpatentable over Sasai et al. [JP 07-192926] in view of Yoshizawa et al. [EPO 0 637 038 A2].

Sasai et al. discloses an interface module for LAN having a pulse transformer [4, 7] including a core [15] and windings [13, 14] wound about the core.

Sasai et al. discloses the instant claimed invention except for the specific structure of the core.

Yoshizawa et al. discloses a pulse transformer in an interface module for local data network with including magnetic core made of an amorphous or nanocrystalline alloy with a permeability greater than 15000 and a winding of a number of turns between 5 and 25 [see examples 1-2 and Tables 1-2].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the core structure of Yoshizawa et al. for the core of Sasai et al., for the purpose of improving inductance and perfomance.

Response to Arguments

Applicant's arguments filed 2/23/2004 have been fully considered but they are not persuasive.

Applicant argues that:

- [1] Applicant have revised claim 1 to refer to an interface module for local area networks (LANs) instead of local data networks; and
 - [2] Yoshizawa, Binkofski and Suzuki structure are not for local area networks (LANs).

Art Unit: 2832

1

Examiner disagrees.

Regarding [1] and [2], a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. In a claim drawn to a process of making, the intended use must result in a manipulative difference as compared to the prior art. See In re Casey, 152 USPQ 235 (CCPA 1967) and In re Otto, 136 USPQ 458, 459 (CCPA 1963). The recitation of "for a local area networks (LANs)" has not been given patentable weight because the recitation occurs in the preamble. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone. See In re Hirao, 535 F.2d 67, 190 USPQ 15 (CCPA 1976) and Kropa v. Robie, 187 F.2d 150, 152, 88 USPQ 478, 481 (CCPA 1951).

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after

Art Unit: 2832

. 4

the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TUYEN T NGUYEN whose telephone number is 571-272-1996. The examiner can normally be reached on M-F 8:30-6:30.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
